Battleship yamato 3d model

-50% maxPage 2 Buy or download ready-to-manufacture professional 3D models for free in CG projects, film and video production, animation, visualizations, games, VR/AR and more. Assets are available for download in many industry-accepted formats, including MAX, OBJ, FBX, 3DS, STL, C4D, BLEND, MA, MB and others. If you're looking for a high poly or 3D property in real time, we have a leading digital art library for all your needs. This category covers 3D aircraft. CG planes will fit into simulations, visualizations, advertisements and videos. Bodies and drone parts will delight fans of tiny flying vehicles. And rigged models are ready to be imported into game engines. Staircase, fireplace, 3D models as well as decorations such as frames, pillows or lamps can be found in the extensive architectural detail The car category contains cars 3D models, a library of low poly models. The interior and exterior can be used to build digital kitchens and bedrooms, as well as castle rooms and dungeons whether you're an architect, engineer or indie game developer. Browse architectural exteriors from facades, urban buildings to landscape buildings, residential houses, industrial structures and full-scale 3D city models. Some of the funds are low poly and can help you finish your game or VR/AR app. This category contains realistic 3D elements and details of architecture, construction and engineering interior design. You can use these 3D models for animation or games - some of them are rigged and low poly. The car category contains automotive 3D models, low poly versions that will be attractive to game designers, others - filmmakers or advertisers. From classic cars to race and racing cars to concept cars, there's a huge variety of 3D auto models. In this category you will find 3D models of people, people, science fiction, clothing and more. From heart and hand to detailed realistic male or female models. Many models are furnished and can be easily added to your game or animation. Food helps create realistic scenes of domestic life. 3D fruits, vegetables, drinks and meals are all here. Restaurant commercials, AR apps for healthier eating. Whether you were looking for a 3D pizza or a wedding cake model, they're here. 3D tables, chairs, sofas, beds in different textures (wood, metal, etc.) and styles (retro, modern, etc.) are on hand. This category is intended for everyone who engages in architecture and interior design, as well as advertisers. 3D models of household items are used for details of rooms. You can put a 3D dinner set on the table, or have pepper and salt containers to complete the kitchen interior, perhaps put some lights and flowers near the bed to create a luxurious feel. Building materials, engineering tools, machines and containers that provide both ecological details and interactive, furnished elements. This is perfect for game simulation developers or people build the level of the building yard. This category contains 3D model models flora organisms such as flowers,

trees, grass, creepers, greenery, herbs, perennials, seedlings, shoots, shrubs, slips, sprouts, vines, grass. To buy or download the free 3D model, review the categories below. Space is a category full of low-key, game-ready models of sci-fi spaceships, asteroids, planets (including Earth and realistic space shuttles for the more scientifically favored.3D space models are useful for space simulator VR games. Trucks, ambulances, buses, trains, tractors, bicycles and motorcycles - this category is for people who want their city streets to be filled with realistic and sci-fi vehicles, and for those who do simulation games or formatting posters. Vessels cover ships, yachts, boats and other water vehicles. Rigged 3D models will play well in video games, animation, while CG models are there for your scenes or other apps where visual fidelity is more important than polycount. In this category you can buy 3D models of weapons, weapons, swords and artillery modern and historical that use military forces and self-defense. You can use models for games - some of them are polygons optimized and ready for game engines. Browse the library of beautifully crafted 3D materials and find the most useful, ready-to-use textures to prepare ready or photorealistic models, upgrade the property library and improve 3D work. Help YAMATO Battleship Model Yamato was a plume of the Japanese combined fleet. It was the largest battleship ever built, surpassing the largest Allied battleships by more than 20 percent. Even in this huge size, Yamato could reach a top speed of 28 knots. This remarkable performance had much to do with her bulby bow, which ripped out 10-foot waves that cancel out other waves generated by the main part of the ship, a greatly reduced pull from the front. To come up with this great design, Japanese engineers tested 50 different models. Yamat's sides could survive 10,000 pounds of heavy armored piercing missiles like those from U.S. Iowa weapons. At 23,000 tonnes, her steel armour weighed more than 30 per cent of her total weight. Armoured panels with an unprecedented 25 inches (63 cm) thick protected the domes of its main guns. Yamat's nine main guns were the largest ever crowned by a warship. Each gun was 21 meters long, weighed 147 metric tons and was capable of firing high-explosive or armor-piercing grenades. The guns fired 18-inch (46 cm) diameter grenades that weighed around the Honda Civic car. Nine guns are mounted on three domes. Each of these domes weighed more than the entire American Fletcher-class destroyer (3,000 tons vs. 2,100 tons.) Yamat's secondary rifles were impressive, too. Her six-inch guns - that is, guns firing six-inch-diameter grenades, range of 27 kilometers. And her 24 five-inch guns, mounted in 12 domes, could destroy targets nine miles away. Km. In April 1945, with the U.S. invasion of Okinawa, the Emperor demanded action from what was left of the Navy. That prompted the deputy chief of staff of the Imperial Japanese Navy and the chief of staff of the combined fleet, Vice Admiral Seichi It to scrape back everything he could to sail against the Americans. That's what Yamato meant. Her combat fleet was simply an easy Agano-class cruiser weighing 6,000 tons of Yahagi and eight destroyers. This was supposed to be a one-way mission, a fight against the 1,500-ship U.S. fleet that overpowered him by a factor of at least 6:1. Ito knew that and personally commanded the attack. Dubbed Operation Ten-Go (Heaven One), the fleet began on 7 October 1945. There, it soon faced more than 400 carrier-based aircraft on a fleet of 11 flat plates. Escorts protected Yamato from submarine attacks, but no aircraft helped her on air. By 1200, the first aircraft appeared over Yamato. By 1400, the cruise ship Yahagi had sunk along with half of the destroyers. American pilots concentrated their torpedoes under Yamat's waterline near her bow and stern where her armor was thinner. And the attacks were on only one side of the troupe. By 1420. Yamato fought a huge battle, but couldn't match nearly 400 plane attacks. The battle was hopeless, but it fought bravely. Yamato received 12 bombs and seven torpedoes within two hours of the battle. Her 1,000 waterproof compartments couldn't save her. It has suffered more than 11 torpedoes and six bombings. In 1423, one of the two Bow magazines detonated in a huge explosion. A fire raging in a secondary battleship magazine caused tons of ammunition to be ignited simultaneously, producing explosions that ripped the ship in half. These explosions were the largest ever at sea — more than 5 km high — seen 180 miles away on Kyushu. 2,747 people, including Vice Admiral Seichi Itō, the fleet commander, left with Yamato. It was more than a loss by the U.S. Navy in all attacks on Pearl Harbor. The sinking of the Yamato ended the era of battleships. Aircraft carriers became king of the sea after that. This primarily wooden model of the battleship Yamato has the following qualities: - Correct the gray hue for Japanese battleships. This is very important. - Beautiful wooden deck, not yellowish - Tough look like a real war threat. This is a work of art that no one else could have achieved. - Large 53 long model: plank-on-frame, hollow hull construction (very important), weighing less than 20 lbs (The solid hull of this model would be over 90 lbs, out of range for many standard table ratings that is 70 lbs. Dimensions: 53 L x 14 T x 9 W \$7,500, shipping and insurance in the U.S. is included. Other countries, \$500 lump sum. 30 long (1/350 scale), solid hull. \$2,500, U.S. shipping and insurance is included. Other countries, \$300 lump sum. Models are built only on commission. All we need is a little to start the process. \$900 The remaining balance will not be due until the model is complete, in 3-4 months. We will send you an e-mail with 24 hours to confirm your order. Don't be fooled by some very cheap Yamato models spreading there. They have very wrong hull shape, poor superstructure, cheap deck, simplified guns, wrong fence, 'interesting' air planes... They seem to have come from one export manufacturer who freely claims that their products are of museum quality. Perhaps these museum qualities fit into their local village so-called Museum!
